

## Westica Communications Limited

### Job Vacancy.

<b>Job Title:</b>	Installation Technician
<b>Functional Group:</b>	Engineering
<b>Reporting to:</b>	Technical Director
<b>Location:</b>	Office based (Glasgow G52 4NN)

#### Outline Job Description

Reporting to the Technical Director, this is a multi-technology role for an enthusiastic technician. The role will involve installation and commissioning of radio and network equipment at customers sites throughout the UK (may be extended to overseas activity in the future), plus working with the Westica engineering team on other technical activities within the factory in Glasgow. The technician should demonstrate the aptitude to be able to complete additional technical training and to take on further product and technology activities.

#### Specific Duties of role

- Travel to customer sites in both UK, to install and commission radio and network equipment (this may require at heights work and specific customer site training/security clearances)
- Work with sub-contractors during installations
- Setup and configure equipment in the Westica factory,
- Carry out other technical activities as required .in the Westica factory
- Attend product specific training
- Work with the account team to ensure customer satisfaction

#### Pre-requisites

A higher-level qualification such as an HNC in an engineering discipline desirable

Current driving licence

Some existing experience in a technical environment desirable

Knowledge of telecoms, networking, ethernet technologies desirable

Aptitude for at heights training work (physical ability, safety, first aid)

Ability to work on own at a remote site if necessary.

The personality to build an excellent rapport with a small team of colleagues
